

FutureXcel (Week # 2)

Data Science

Official Task Instructions:

Data Science Interns

Branding rule: Footer on every report: “Analytics by [Name]”.

WEEK 2 — Dynamic Visualization Dashboard (Multi-Chart Analysis)

What is it? Build a dashboard that summarizes data visually.

What it should contain: At least 6 charts (line, bar, histogram, scatter + trendline, heatmap, pie/donut), dashboards layout, annotations explaining insights, interactivity (filters or dropdowns optional).

Task description: Build a data dashboard (static or interactive) with a narrative: each chart must answer a question.

Required work:

- Charts exported as PNG/SVG + clickable interactive link (Plotly Dash, Streamlit optional)
- Insights write-up (≥ 2 per chart)
- PDF with dashboard images and notes

Common problems & fixes: Overplotting → bin or aggregate data; misleading axes → always include units/labels.

Recommended tools: Matplotlib/Seaborn/Plotly, Streamlit, Google Data Studio.
